

Innovative and Inclusive Democratic Spaces for Deliberation and Participation

iDEM project will provide...

Deep analysis of Language complexity barriers in participatory democratic spaces, **to identify users' needs and the reasons behind their difficulties** in understanding information on public matters.

Artificial Intelligence tools that **simplify and make information more understandable** to participate in the democratic debate, aimed at people with communication difficulties or intellectual disabilities.

Develop and implement four use cases in different languages, with a deliberative approach and gender perspective, engaging groups who experience exclusion from democratic processes or spaces, due to language barriers related to the complexity of language.
